Documentation & Verification

This PDF is generated from live OneHR MSSQL onehr_v2 via Prisma. Workflow ID: 7829f651-1774-4aa2-a757-5c3203738d15 tested via POST /v1/auth/login for each approver (hr@, manager@, admin@) with IP 102.89.x.x and User-Agent Mozilla/5.0. Each PATCH /v1/workflows/instances/:id/approve creates Approval + AuditLog with timing.

Verification steps:

- 1. Login: POST /v1/auth/login {email, password} !' JWT {sub, role, org_id} !' AuditLog POST /v1/auth/login with IP/duration
- 2. Approve: PATCH /v1/workflows/instances/:id/approve {comment} + Authorization: Bearer !' Approval {approverId, status:approved, decidedAt} !' AuditLog PATCH .../approve with duration/statusCode
- 3. RBAC: RbacGuard checks role/permissions (manager can only approve team, hr_admin/manager/org_admin)
- 4. Tenant: TenantInterceptor sets sp_set_session_context @org_id, all queries filtered by organizationId
- 5. Audit: AuditLogInterceptor logs all POST/PATCH/DELETE with orgId, userId, action, entityType, newValue, ip, userAgent, duration, statusCode — append-only
- 6. PDF: Generated via pdfkit (jspdf) from live DB, includes who, role, email, when, IP, duration, comment per step, plus full audit trail export
